

IMPORTANT:

- When retrofitting the Quantum Remote Stop System onto a unit, the complete kit assembly (A1) should be selected. The complete kit assembly includes an installation instruction, English owner's manual, keyfob, module, and all the mounting components shown except the LM mounting bracket and screws. The LM mounting bracket and screws are included with the complete LM electronics assembly.
- When ordering replacement keyfobs (A5), the new keyfob will need to be paired with the QRS module. It is recommended to order an owner's manual with the keyfod, since the owner's manual covers pairing instructions and proper operation.
- When ordering a replacement keyfob with module (A6), the keyfob will come paired with the module.
- The Remote Stop Switch cannot be used with the PTO version of the Quantum Backup Camera. The Remote Stop Switch uses the same mounting bracket as the Backup Camera and they cannot mount together.
- If equipped with the BUS version of the Backup Camera, the Remote Stop Switch can be added.
